EDUCATION

SRM Valliammai Engineering College

Bachelor of Technology (B.Tech.) in Artificial Intelligence and Data Science

Tamil Nadu, India

Expected May 2028

- CGPA: 8.83/10.0

EXPERIENCE

Machine Learning Intern

Jun 2026

CODSOFT (Remote)

- Built four end-to-end machine learning applications, including Spam SMS Detection, Credit Card Fraud Detection, Customer Churn Prediction, and Movie Genre Classification using Python, Scikit-learn, and Streamlit.
- Preprocessed structured and text datasets, performed feature engineering, and trained classification models for predictive analysis.
- Evaluated model performance using Accuracy, Precision, Recall, F1-score, and ROC-AUC to improve prediction reliability.
- Developed interactive Streamlit web applications for real-time prediction and user-friendly deployment.
- Used Git and GitHub for version control, project management, and code collaboration.

PROJECTS

Spam SMS Detection | *Python, TF-IDF, Naive Bayes, Streamlit*

- Developed an SMS spam classification model using TF-IDF vectorization and the Naive Bayes algorithm.
- Performed text preprocessing, feature extraction, and model evaluation to improve prediction accuracy.
- Built an interactive Streamlit web application for real-time spam message prediction.

Credit Card Fraud Detection | *Python, Scikit-learn, Streamlit*

- Implemented multiple classification algorithms to identify fraudulent credit card transactions from highly imbalanced datasets.
- Applied preprocessing techniques to handle class imbalance and evaluated models using Precision, Recall, F1-score, and ROC-AUC.
- Created a Streamlit web application for real-time fraud prediction with interactive user inputs.

Customer Churn Prediction | *Python, Pandas, Scikit-learn, Streamlit*

- Built a machine learning model to predict customer churn using classification algorithms and feature engineering techniques.
- Performed data preprocessing, feature engineering, and trained classification models for improved prediction accuracy.
- Designed an interactive Streamlit application to visualize and predict customer churn.

Movie Genre Classification | *Python, NLP, TF-IDF, Scikit-learn*

- Built a Natural Language Processing model to classify movie genres based on plot descriptions.
- Performed text preprocessing, TF-IDF feature extraction, and trained machine learning models for text classification.
- Evaluated model performance and improved genre classification through feature engineering techniques.

TECHNICAL SKILLS

Languages: Python, Java, C, SQL

Libraries: Scikit-learn, NumPy, Pandas, Matplotlib

Developer Tools: Git, GitHub, VS Code, Jupyter Notebook, Streamlit

Core Concepts: Data Structures, Algorithms, Object-Oriented Programming (OOP), Machine Learning, Data Analysis, Natural Language Processing (NLP)
